REMARKS IN RESPONSE TO OFFICE ACTION

No amendments have been made. Claims 1-11 remain in the application.  
Reconsideration and reexamination is respectfully requested.

In paper 21, various rejections were repeated from paper 17. Applicant's remarks in the reply to paper 17 are still applicable. The present remarks are limited to new art cited in paper 21.

In paper 21, claims 1-11 were under 35 U.S.C. § 103 in light of prior art disclosed in the specification and further in view of Japanese Patent No. 404095287 (Takahashi). As applicant discussed in the reply to paper 17, in all the prior art discussed in the application, and in all the prior art cited by the applicant or the examiner, only the presence of write protect devices is detected. Takahashi merely provides one more example of detecting the presence of a write protect device. There is no teaching or suggestion that the write protect device prevents operation, as opposed to mere software detection of the device. Software can always ignore the presence of the devices. Accordingly, the prior art does not teach or suggest covering the power calibration area, or any other area required for functionality. The examiner has not provided any prior art in which a write protect device physically

prevents a function required for writing. The examiner has failed to establish a *prima facie* case for obviousness.

Respectfully submitted,

A. W. Winfield
